

Your Hospital, YOUR CARE

CANCER CARE AT RMH

Ross Memorial Hospital plays a vital role in delivering high-quality cancer screening, diagnostic services, and cancer care. As part of the regional cancer system, the Ross is helping improve access to timely screening, diagnosis, and follow-up, allowing patients to receive the care they need while minimizing travel away from their families and support networks.

Ontario Breast Screening Program (OBSP) and Mammography

Comprehensive breast screening, diagnostics, and coordinated follow-up care.

High-Risk Breast MRI

Offered as part of a coordinated breast screening pathway to support earlier detection and personalized care for patients at elevated risk.

Ontario Lung Screening Program

RMH is a spoke site for the Central East Regional Cancer Program. Eligible participants undergo a low-dose CT scan, a quick and non-invasive imaging test that uses a small amount of radiation to create detailed images of the lungs to screen for masses.

Cancer Surgery

RMH surgeons perform biopsies, breast, and bowel surgery to remove masses, as well as Gynecology, and Urologic cancer surgeries

Endoscopy

Includes colonoscopy, gastroscopy, and cystoscopy procedures. Findings are used to guide personalized treatment plans, appropriate follow-up care, and support ongoing surveillance for patients at risk of gastrointestinal cancers.

Surgical Pathology

After a biopsy or surgical procedure, tissue samples are examined by highly trained pathologists to determine whether disease is present and to help guide the next steps in a patient's care.

Radiation Therapy Consultation

RMH provides on-site Radiation Oncology specialist consultations from the Central East Regional Cancer Program team.

Consultation and Therapeutic Care

RMH provides a range of specialized outpatient services that support cancer diagnosis, treatment, and ongoing care. They include Cervical Screening and Colposcopy.

Palliative Care and Symptom Management

A dedicated, specialized team who collaborate to create individualized care plans tailored to each patient's needs and goals that respects personal choices and enhances quality of life at every stage.
